Dear Parents,

Welcome to MAST CLINIC, a kid-friendly place where infants, toddlers and young children can learn to develop or refine the essential skills in life. We are special and unique. At MAST CLINIC, love and respect for the *spirit* of the child are as important as physical, cognitive, sensory and perceptual development. Children like coming to and are comfortable at MAST CLINIC.

Despite over 4 decades of clinical practice, the work at MAST CLINIC still comes from the heart. Jackie truly is a *kid whisperer*. One of the delights for parents of babies (and others) is Jackie's ability to "read" non-verbal cues and to help you interpret who your emerging child is.

In the beginning your child will be observed, sometimes for what seems quite a while before intervening. Jackie is sensitive to the comfort level of a child and works within those boundaries. Although it may seem that your child is merely playing, there is a therapeutic purpose behind all the activities that occur at MAST CLINIC, even when Jackie is sitting back and observing.

Children are helped to be the best that they can be. While children always come first, there is a level of professional competence at MAST CLINIC that is world renowned. What happens at MAST CLINIC is special.

There is a good reason that children tell their parents that they "want to play at Jackie's".
.....

We look forward to meeting you and your child. Feel free to ask questions and to take advantage of our *massage chair* (for grown-ups only).

Note: Mast Clinic's support staff work offsite so they can be parents too. Be assured that they will return calls or emails as soon as possible.

Your Child is Worth It!
